# DC INVERTER MULTI VRF INDOOR UNIT TECHNICAL SALES GUIDE

## 1 PRODUCT CHARACTERISTIC

### 1.1 Low static pressure Duct Type Indoor Unit

Appearance	Characteristic
	<ul style="list-style-type: none"><li>◆ Low static pressure, low noise.</li><li>Especially suitable for rooms of compact structure or small installation space. Also it provides you with a comfortable and quiet living environment.</li><li>◆ Convenient installation.</li><li>Tab type plastic filter, detachable fan motor, independent water pump assembly, all for convenient maintenance.</li><li>◆ Intelligent drainage device.</li><li>Water height difference up to 3.3ft. which can effectively drain out condensing water and save space.</li><li>◆ Protection function.</li><li>Water overflow protection, anti-freezing protection, fan motor overload protection, temperature sensor malfunction protection.</li></ul>

### 1.2 Four-way Cassette Type Indoor Unit

Appearance	Characteristic
	<ul style="list-style-type: none"><li>◆ Strong and balanced airflow.</li><li>Unit features auto operation, Four-way airflow, 7 fan speeds and strong circulating airflow.</li><li>◆ DC inverter motor.</li><li>With good speed regulation performance, motor efficiency improved by 30% vs. normal motor.</li><li>◆ Ultra-low noise operation.</li><li>DC inverter motor can realize stepless speed regulation to lower noise. Indoor unit can be set to work under auto quiet mode via wired controller.</li><li>◆ Protection function.</li><li>Water overflow protection, anti-freezing protection, temperature sensor malfunction protection, fan motor overload protection.</li><li>◆ Intelligent drainage device.</li><li>Water height difference up to 3.3ft. which can effectively drain out condensing water and save space.</li></ul>

### 1.3 One-way Cassette Type Indoor Unit

Appearance	Characteristic
	<ul style="list-style-type: none"><li>◆ Small installation space.</li><li>Thickness of the main body is only 178mm, which meets the requirements of delicate and compact space..</li><li>◆ Detachable grille and long life filter.</li><li>Grille is detachable for easy cleaning. With long life filter, cleaning cycle is 20 times longer.</li><li>◆ High drain pump lift.</li><li>Drain pump lift reaches 1.0m, which can effectively drain water.</li><li>◆ Protection function.</li><li>Water overflow protection, anti-freezing protection, fan motor overload protection, temperature sensor malfunction protection, auxiliary electric heating overheat protection(This function is not included in pure heat pump unit).</li></ul>

## 1.4 Floor Ceiling Type Indoor Unit

Appearance	Characteristic
	<ul style="list-style-type: none"> <li>◆ Hoisted or seated, flexible installation Unit can be hoisted or seated. When seated, suspended ceiling is not needed.</li> <li>◆ Protection function Anti-freezing protection, temperature sensor malfunction protection, fan motor overload protection.</li> <li>◆ Appealing aesthetics With beautiful and elegant front panel, it is congenial to the indoor surroundings.</li> <li>◆ Horizontal and vertical air swing Wider air swing range for your comfortable working and living environment.</li> </ul>

## 1.5 Slim Duct Type Indoor Unit

Appearance	Characteristic
 	<ul style="list-style-type: none"> <li>◆ Highly Efficient &amp; Energy-saving. High-efficiency DC brushless motor is used. Its efficiency is improved by over 30% compared with common motor. Evaporator flow path adopts simulating optimized design via the refrigeration system simulation software, which has greatly increased the heat exchange capacity of evaporator.</li> <li>◆ Slim &amp; Compact. The unit is only 200mm's thick and 450 mm's deep. Suspended ceiling doesn't have to be very high. It is suitable for ordinary rooms.</li> <li>◆ Wiring of Electric Control Box. Mounting board of electric control box elements are arranged at both sides of the mounting board of fan motor. There is a wire-cross notch on each side so that wiring at both sides of the mounting board of fan motor is convenient and efficient. Strong and weak current are also separated to ensure the effectiveness of weak current signal transmission.</li> <li>◆ Protection Functions. Anti-freezing protection, fan motor built-in overload protection, temperature sensor protection.</li> <li>◆ Ultra-quiet. High-efficiency centrifugal fan and ultralow noise volute are developed with ANSYS and Fluent. They have also gained national patents. Meanwhile, inlet mute valve is adopted so that noise of the complete unit is greatly reduced.</li> <li>◆ Fast &amp; Strong. Intelligent temperature control technology is adopted. Cooling/Heating function is fast and strong so that room temperature can quickly reach set temperature.</li> <li>◆ Flexible Installation. Based on the requirements of building and utilization, different ways of air return and different air supply static pressure can be selected.</li> <li>◆ CAN Bus Communication Technology. System response speed is faster and communication is more reliable. Auto addressing, non-polar communication, free wire matching.</li> <li>◆ Convenient Operation &amp; Maintenance. Electric control box is attached independently so that it can be detached as a whole, which is convenient for fan and motor maintenance.</li> </ul>

# DC INVERTER MULTI VRF INDOOR UNIT TECHNICAL SALES GUIDE

## 1.6 Wall Mounted Type Indoor Unit

Appearance	Characteristic
	<ul style="list-style-type: none"><li>◆ Filter can be cleaned The filter is removable and can be cleaned for easy maintenance.</li><li>◆ Quiet design High-efficiency cross flow blade and imported silence valve are adopted, which greatly reduce the noise of entire unit.</li><li>◆ One IDU with several wired controller and several IDUs with one wired controller One IDU can be connected with several wired controllers in order to control one IDU from different location; meanwhile, several IDUs can be connected with one wired controller in order to achieve centralized control of 16 IDUs in maximum.</li><li>◆ Wide air supply range The air supply range is wide, so that the wind can be delivered to each corner of the room naturally and evenly.</li><li>◆ Super cooling and heating function Intelligent temperature control technology is adopted with super cooling and heating function, so that the room temperature can reach set temperature rapidly.</li><li>◆ I-feel function When I-feel function is activated, the unit can detect the temperature around the user and adjust the temperature, so that the comfort of user is improved. (Remote controller shall be equipped)</li><li>◆ Panel is removable The panel of indoor unit can be removed easily for convenient maintenance.</li><li>◆ The response of the system is quicker with more reliable communication; auto addressing, non-polar communication and free wiring are available.</li><li>◆ Multiple protections Anti-freezing protection, temperature sensor malfunction protection, fan motor overload protection.</li></ul>

## 1.7 Fresh air Processing Type Indoor Unit

Appearance	Characteristic
	<ul style="list-style-type: none"> <li>◆ Fresh Air Processing Indoor Unit.</li> <li>Airflow volume: 1000m³/h~4000m³/h.</li> <li>Applicable range: Residential houses, villas, business buildings, hotels, apartments, etc.</li> <li>◆ One system, two functions.</li> <li>Adopted with DC inverter technology, Fresh Air Multi VRF System features air conditioning function and fresh air function.</li> <li>◆ Enjoy fresh air.</li> <li>◆ Less investment.</li> <li>Fresh Air Multi VRF System can be combined with Gree GMV5. For a same room, if the same amount of fresh air is to be taken, then the cost of GMV5+Fresh air unit is equivalent to the cost of GMV+Air exchange fan.</li> <li>◆ Less operation cost.</li> <li>Unit can control refrigerant output according to actual needs to ensure constant airflow temperature. By adjusting power output, light-load but high power operation can be avoided. Thus, operation cost can be greatly reduced.</li> <li>◆ Less installation space.</li> <li>Save installation space for outdoor units. Especially suitable for places that have restricted installation space.</li> </ul>

## 1.8 Console Type IDU

Appearance	Characteristic
	<ul style="list-style-type: none"> <li>◆ Multiple fan speed</li> <li>The fan can operate in multiple speed and satisfy different air flow volume requirements.</li> <li>◆ Detachable grille and long life filter</li> <li>Grille is detachable for easy cleaning. With long life filter, cleaning cycle is 20 times longer.</li> <li>◆ Protection function</li> <li>Anti-freezing protection, fan motor overload protection, temperature sensor malfunction protection, auxiliary electric heating overheat protection (This function is not included in pure heat pump unit).</li> </ul>

## 1.9 Floor Standing Type Indoor Unit

Appearance	Characteristic
	<ul style="list-style-type: none"> <li>◆ Wide Application</li> <li>It can be widely adopted in hotels, restaurants, office, etc.</li> <li>◆ Auto clean to ensure a healthy life</li> <li>After turning off the unit, the indoor fan will keep running in low speed for a moment to dry the inner components and parts, in order to prevent mildew and keep user healthy.</li> </ul>

# DC INVERTER MULTI VRF INDOOR UNIT TECHNICAL SALES GUIDE

## 1.10 Compact Four-way Cassette Type Indoor Unit

Appearance	Characteristic
	<ul style="list-style-type: none"><li>◆ Compact design for easy installation. Units maintain the uniform length and width with consistent ceiling opening and panel dimension, convenient for design and installation.</li><li>◆ Ultra-low noise operation. DC inverter motor can realize stepless speed regulation to lower noise. Indoor unit can be set to work under auto quiet mode via wired controller.</li><li>◆ Intelligent drainage device. Water height difference up to 1.0m, which can effectively drain out condensing water and save space.</li></ul>

## 1.11 360°Air Discharge Compact Cassette Indoor Unit

Appearance	Characteristic
	<ul style="list-style-type: none"><li>◆ 360° Air Supply. 360°air supply design for balanced temperature distribution, which provides more comfortable experience.</li><li>◆ Independent Swing Control. 4 swing blades can be controlled independently and maximum 625 air supply angle combinations can be realized for free and humanized control, avoiding direct blow to people.</li><li>◆ Ultra-low Noise Operation. DC inverter motor can realize stepless speed regulation to lower noise indoor unit, it can be set to work under auto quiet mode via wired controller.</li><li>◆ Intelligent Drainage Device. Water height difference up to 1.2m, which can effectively drain out condensing water and save space.</li></ul>

## 1.12 AHU-KIT Type

Appearance	Characteristic
 	<ul style="list-style-type: none"> <li>◆ Can be conveniently controlled via the third party controller. AHU-KIT adapter can be controlled via Gree wired controller, and can also be controlled via the third party controller by adjusting dial code, which can realize ON/OFF control, mode setting, temperature adjustment, feedback of unit operating status, etc.</li> <li>◆ Make the air handling unit is with functions and advantages of VRF products . Connected to VRF system of air handling unit and retained the original user function and project application function of VRF system. Installation, debugging, operation and maintenance are more convenient.</li> <li>◆ Multiple installation method for convenient project design. The air handling unit equipped with AHU-KIT has multiple methods for connecting VRF system. It can independently connect to VRF system to compose a one-to-one proposal; it can also match with other air handling unit or general VRF indoor units to connect to the same VRF system for composing a one-to-more proposal. In this case, it is convenient for project design.</li> <li>◆ Independent design, convenient installation. AHU-KIT is composed by two independent boxes( electronic expansion valve and control box) and designed independently, which is convenient for installation and application.</li> <li>◆ Error signal is connected for reliable installation and operation. Error signal of air handling unit is connected to AHU-KIT. Where there's malfunction, the unit will stop operation, same and reliable.</li> <li>◆ Dual control ways</li> </ul> <p>It can be controlled according to normal indoor unit and also according to fresh air indoor unit.</p>

## 1.13 Two-way Cassette Type Indoor Unit

Appearance	Characteristic
	<ul style="list-style-type: none"> <li>◆ Beautiful Appearance. With beautiful and elegant front panel, it is congenial to the indoor surroundings.</li> <li>◆ Two-way air flow design. Two-way air outlet, to stretch air outlet distance and solve air supply problem of elongated room.</li> <li>◆ Intelligent drainage device. Water height difference up to 1.0m, which can effectively drain out condensing water and save space.</li> <li>◆ Multiple protections. Anti-freezing protection, temperature malfunction protection, fan motor overload and humidity sensor protection.</li> </ul>

# DC INVERTER MULTI VRF INDOOR UNIT TECHNICAL SALES GUIDE

## 1.14 Air Handler type Indoor Unit

Appearance	Characteristic
	<ul style="list-style-type: none"><li>◆ Highly flexible installation. The unit is designed for outdoor installation and less indoor space taking, allowing easy installation and maintenance. The unit can be installed on the ground or on the roof of the building, which means the installation is totally flexible depending on the project requirement.</li><li>◆ Cold air prevention design. When heating in winter, cold air prevention function is enabled so that air won't be blown out until it's warm.</li><li>◆ Long life and washable filter. The filter is easy to be dismantled and installed. You can use dust collector or water to clear away the dust.</li></ul>

## 1.15 Super High Static Pressure Duct Type Indoor Unit

Appearance	Characteristic
	<ul style="list-style-type: none"><li>◆ High static pressure design. Static pressure can be up to 200Pa(0.8 In.W.G), especially suitable for places in need of long distance airflow.</li><li>◆ Convenient installation. You can choose circular air duct or rectangular air duct according to actual needs. Or you can choose different ways of air return.</li><li>◆ Easy maintenance. The system has maintenance port for easy maintenance.</li><li>◆ Protection function. Anti-freezing protection, fan motor overload protection, temperature sensor malfunction protection.</li></ul>

## 1.16 Concealed Floor Standing Type Indoor Unit

Appearance	Characteristic
	<ul style="list-style-type: none"><li>◆ Wide capacity range from 2.2kW to 7.1kW</li><li>◆ DC motor is adopted, which is more efficient.</li><li>◆ All units are only 200mm's thick, saving space while offering highly efficient performance.</li><li>◆ High ESP allows installation with air ducts.</li><li>◆ The low altitude design allows installation under a window. It is applicable for hotels, schools and office buildings.</li><li>◆ The three different height choices of ex-factory supporter satisfy users' different installation needs.</li></ul>

## **1.17 360°Air Discharge Cassette Indoor Unit**

Appearance	Characteristic
	<ul style="list-style-type: none"> <li>◆ 360° Air Supply 360°air supply design for balanced temperature distribution, which provides more comfortable experience.</li> </ul>
	<ul style="list-style-type: none"> <li>◆ Independent Swing Control 4 swing blades can be controlled independently and maximum 625 air supply angle combinations can be realized for free and humanized control,avoiding direct blow to people.</li> </ul>
	<ul style="list-style-type: none"> <li>◆ Ultra-low Noise Operation DC inverter motor can realize stepless speed regulation to lower noise indoor unit, it can be set to work under auto quiet mode via wired controller.</li> </ul>
	<ul style="list-style-type: none"> <li>◆ Intelligent Drainage Device Water height difference up to 1.2m, which can effectively drain out condensing water and save space.</li> </ul>

## 1.18 Heat Storage Module

Appearance	Characteristic
	<ul style="list-style-type: none"> <li>◆ Auxiliary defrosting device The heat storage module can assist defrosting. The defrosting time of air conditioner with this module is shorter, the temperature fluctuation in the room is smaller during defrosting.</li> <li>◆ Easy maintenance The system has maintenance port for easy maintenance.</li> </ul>

#### Notes:

- ① Rated Cooling capacity test conditions: indoor 27°C DB/19°C WB, outdoor 35°C DB; connection pipe length: 5 m, without height drop between units
- ② Rated heating capacity test conditions: indoor 20°C DB, outdoor 7°C DB/6 °C WB; connection pipe length: 5 m, without height drop between units
- ③ In the column of "Unit external static pressure": The figure before "/" indicates the default external static pressure of unit before delivery, and the figures after indicate the adjustable static pressure range of unit.

## 2.7 Fresh Air Processing Unit

Model		GMV-NX450P/A(X4.0) -M	
Cooling capacity	kW	45	
Heating capacity	kW	32	
Air volume	m³/h	4000	
Static pressure (Pa)	Standard	200	
	Optional	300	
Cooling power input	W	1240	
Cooling current input	A	3.40	
Heating power input	W	1240	
Heating current input	A	3.40	
Minimum line current	A	6.5	
Maximum fuse current	A	7.6	
Sound pressure level	dB(A)	58	
Power supply		380~415V 3N~50Hz	
Piping interface	Liquid pipe	mm	Φ12.7
	Gas pipe	mm	Φ28.6
Drain pipe	External diameter × thickness	mm	Φ33×3
Dimensions	W×D×H	mm	1700×1100×650
Net weight	Main body	kg	208

Notes:

- ① Rated cooling capacity test conditions: fresh air inlet 35°C DB/28°C WB; connection pipe length: 5 m, without height drop between units; The default air outlet temperature of the unit is 18°C.
- ② Rated heating capacity test conditions: fresh air inlet 7°C DB/6°C WB; connection pipe length: 5 m, without height drop between units; The default air outlet temperature of the unit is 22°C.

### Notes:

- ① Rated cooling capacity test conditions: indoor 35°C DB/28°C WB, outdoor 35°C DB; connection pipe length: 7.5m, without height drop between units. The default air outlet temperature of the unit is 18°C.
- ② Rated heating capacity test conditions: \*1: indoor 7°C DB, outdoor 7°C DB/6°C WB, \*2: indoor -7°C DB, outdoor 0°C DB / -2.9°C WB; connection pipe length: 7.5m, without height drop between units. The default air outlet temperature of the unit is 22°C.
- ③ In the column of "Air Volume": The figure before "/" indicates the default air Volume of unit before delivery, and the figures after indicate the adjustable air Volume range of unit.
- ④ The sound pressure level will change with the static pressure.
- ⑤ This series can be matched with GMV5 only.

Notes:

- ① Rated cooling capacity test conditions: indoor 35°C DB/28°C WB, outdoor 35°C DB; connection pipe length: 7.5m, without height drop between units. The default air outlet temperature of the unit is 18°C.
- ② Rated heating capacity test conditions: \*1:indoor 7°C DB/6°C WB, outdoor 7°C DB/6°C WB, \*2: indoor 0°C DB / -2.9°C, outdoor 0°C DB / -2.9°C WB; connection pipe length: 7.5m, without height drop between units. The default air outlet temperature of the unit is 22°C.
- ③ In the column of "Air Volume": The figure before "/" indicates the default air Volume of unit before delivery, and the figures after indicate the adjustable air Volume range of unit.
- ④ The sound pressure level will change with the static pressure.
- ⑤ This series can be matched with GMV5 only

Fresh air series indoor unit has two kinds of connection according to different models:

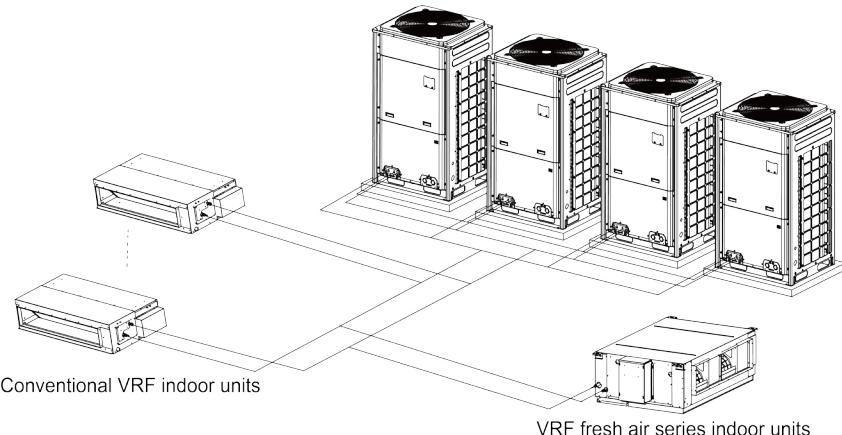

- (1) The following models can be connected to the same outdoor unit with conventional VRF indoor units.

Model of Indoor Unit	Model of Outdoor Unit
GMV-NDX125P/A-T	Connecting condition with GMV-**WM/B-F (or GMV-**WM/B-U; or GMV-**WM/E-X) series modular outdoor unit:
GMV-NDX140P/A-T	The total capacity of connected fresh air series indoor units and conventional VRF indoor units must be within 50%~100% of the capacity of outdoor unit, among which, the total capacity of connected fresh air indoor units cannot exceed 30% of the capacity of outdoor unit.
GMV-NDX224P/A-T ①	Fresh air indoor units can operate independently. The total capacity of connected fresh air indoor units cannot exceed 50%~100% of the capacity of outdoor unit.
GMV-NDX250P/A-T ①	
GMV-NDX280P/A-T ①	

- ① The fresh air volume≤2500m<sup>3</sup>/h

Note: When fresh air series indoor units and conventional VRF indoor units will be connected, please follow the capacity requirement strictly. The total capacity of connected fresh air indoor units cannot exceed 30% of the capacity of outdoor unit, while the total capacity of indoor units shall be within 50%~100% of the capacity of outdoor unit. Otherwise, the comfortableness will be affected or even the unit will be damaged.

# DC INVERTER MULTI VRF INDOOR UNIT TECHNICAL SALES GUIDE

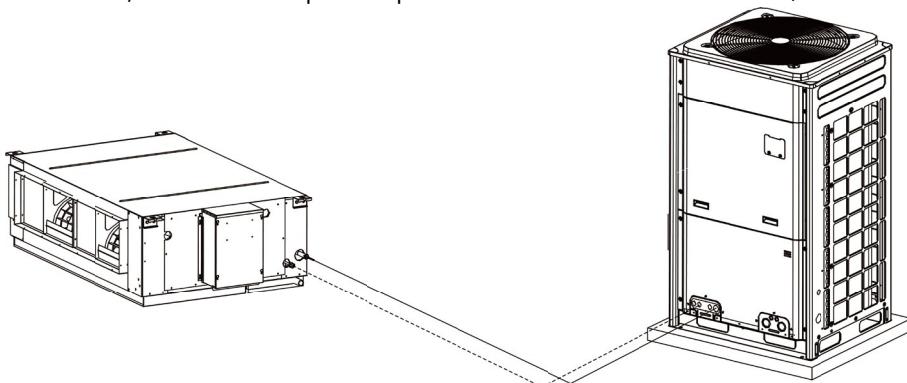

(2) The following models of indoor unit only can be connected in a fixed combination

Model of Indoor Unit	Model of Outdoor Unit
GMV-NX450P/A(X4.0) -M	GMV-450WM/B-F or GMV-450WM/B-U or GMV-450WM/B-X GMV-450WM/E-X or GMV-450WM/E1-X or GMV-Q450WM/B-X(A) or GMV-Q450WM/E-X
GMV-NDX224P/A-T ②	GMV-224WM/B-F or GMV-224WM/B-U or GMV-224WM/B-X GMV-224WM/E-X or GMV-224WM/E1-X or GMV-Q224WM/B-X(A) or GMV-Q224WM/E-X
GMV-NDX250P/A-T ②	GMV-280WM/B-F or GMV-280WM/B-U or GMV-280WM/B-X GMV-280WM/E-X or GMV-280WM/E1-X or GMV-Q280WM/B-X(A) or GMV-Q280WM/E-X
GMV-NDX280P/A-T ②	GMV-280WM/B-F or GMV-280WM/B-U or GMV-280WM/B-X GMV-280WM/E-X or GMV-280WM/E1-X or GMV-Q280WM/B-X(A) or GMV-Q280WM/E-X

② :The fresh air volume > 2500m3/h

Note: “-F” is for the power specification of 208/230V 3~ 60Hz; “-U” is for the power specification of 440-460V 3~ 60Hz; “-X” is for the power specification of 380-415V 3N~ 50/60Hz.

(3) For example:

- 1) Customer select GMV-NDX280P/A-T model. After the unit is installed, the fan static pressure is 200Pa. The required air volume by the customer is 3000m3/h, the corresponding static notch on the curve diagram between air volume and static pressure is notch 09. Because the air volume is more than 2500m3/h, it needs to adopt the second fixed connection method, matching GMV-280WM/B-F(or GMV-280WM/B-X) outdoor unit.
- 2) Customer select GMV-NDX224P/A-T model. After the unit is installed, the fan static pressure is 150Pa. The required air volume by the customer is 2300m3/h, the corresponding static notch on the curve diagram between air volume and static pressure is notch 05. Because the air volume is less than 2500m3/h, it can adopt first connection method or the second fixed connection method by matching GMV-224WM/B-F(or GMV-224WM/B-X) outdoor unit.

a) The capacity is obtained at these test conditions: superheat (SH) = 5°C and supercool (SC) = 3°C.  
 Cooling: Saturated evaporating temperature = 6°C, air return temperature is 27°C (DB)/19°C (WB).  
 Heating: Saturated condensing temperature = 46°C, air return temperature is 20°C (DB).  
 b) The heat exchanger of air handling unit is designed for R410A, and its working pressure is 4.3MPa.  
 c) Quantity of rows of heat exchanger: no more than 4 rows.  
 d) The diameter of copper pipe of heat exchanger is no more than 12.7mm, 9.52mm is recommended.  
 e) Air inlet temperature range of heat exchanger: cooling: 16~35°C, heating: 10~27°C.

Note:

When the AHU-KIT is matched with AHU, they can connect with VRF outdoor unit as VRF indoor unit. The connection is limited by the outdoor unit. There are three kinds of connection method:

(1) Connection method 1: one-to-one

The AHU-KIT as below can adopt one-to-one connection method with VRF outdoor unit. Total capacity of AHU-KIT should be 80%~110% of that of outdoor unit.

Model(Combined)	Capacity in application (kW)	Capacity DIP
GMV-N71U/C-T	7.1	71
GMV-N140U/C-T	9	90
	11.2	112
	14	140
	22.4	224
GMV-N280U/C-T	28	280
	33.5	335
	40	400
	45	450
	50.4	504
GMV-N560U/C-T	56	560
	84	840
	98	840+140
GMV-N560U/C-T+GMV-N140U/C-T	112	840+280
GMV-N560U/C-T+GMV-N560U/C-T	140	840+560
	168	840+840
GMV-N560U/C-T+GMV-N560U/C-T+GMV-N140U/C-T	182	840+840+140
GMV-N560U/C-T+GMV-N560U/C-T+GMV-N280U/C-T	196	840+840+280
GMV-N560U/C-T+GMV-N560U/C-T+GMV-N560U/C-T	224	840+840+560
	252	840+840+840

(2) Connection method 2: one-to-more

The AHU-KIT as below can adopt one-to-more connection method with VRF outdoor unit. Total capacity of AHU-KIT should be 50%~110% of that of outdoor unit.

Model	Capacity in application (kW)	Capacity DIP
GMV-N36U/C-T	2.8	28
	3.6	36
GMV-N71U/C-T	4.5	45
	5.6	56
	7.1	71
GMV-N140U/C-T	9	90
	11.2	112
	14	140
GMV-N280U/C-T	22.4	224
	28	280

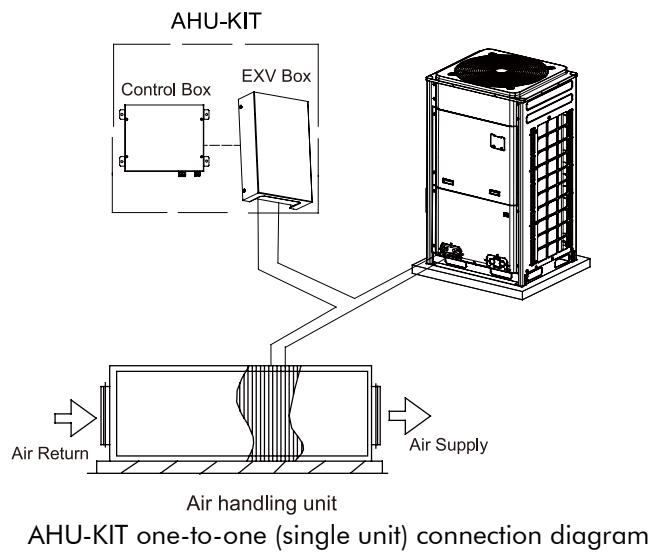

(3) Connection method 3: one-to-more (mixed connection)

The AHU-KIT as below can adopt one-to-more connection method with general VRF indoor unit. Total capacity of AHU-KIT and VRF indoor unit should be 50%~110% of that of outdoor unit. Total capacity of AHU-KIT cannot exceed 30% of that of outdoor unit.

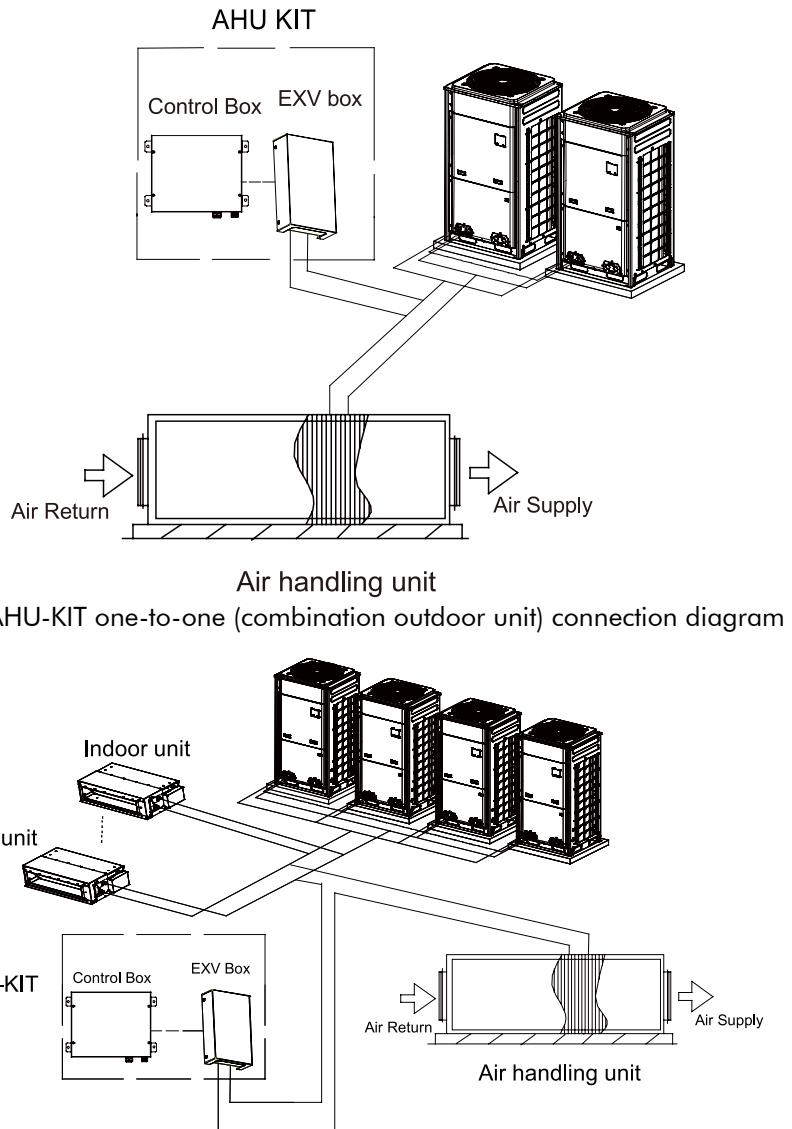

Model	Capacity in application (kW)	Capacity DIP
GMV-N36U/C-T	2.8	28
	3.6	36
GMV-N71U/C-T	4.5	45
	5.6	56
	7.1	71
GMV-N140U/C-T	9	90
	11.2	112
	14	140
GMV-N280U/C-T	22.4	224
	28	280

Notes:

- ① When connecting AHU-KIT with general VRF indoor unit, capacity requirement shall be followed strictly. Otherwise, it may affect the operation, or even damage the unit.
- ② One-to-more means matching between indoor unit and outdoor unit.

## **3 ELECTRICAL SPECIFICATIONS**

Circuit Breaker and Wire Diameter Selection of Indoor Unit

Selection of circuit breakers and power cables for connecting all the indoor units of the same system to the general power supply:

Total Current Capacity of Indoor Units	Circuit Breaker Capacity (A)	Minimum Sectional Area of Power Cable (mm <sup>2</sup> /AWG)	Minimum Sectional Area of Grounding Wire (mm <sup>2</sup> /AWG)
Less than 10A	10	1.0/AWG18	1.0/AWG18
16~10A	16	1.5/AWG16	1.5/AWG16
20~16A	20	2.5/AWG14	2.5/AWG14
32~20A	32	4.0/AWG10	4.0/AWG10
40~32A	40	6.0/AWG8	6.0/AWG8
50~40A	50	10.0/AWG8	10.0/AWG8
63~50A	63	16.0/AWG6	16.0/AWG6
80~63A	80	25.0/AWG4	16.0/AWG6
100~80A	100	35.0/AWG2	16.0/AWG6
125~100A	125	50.0/AWG1	25.0/AWG4

Selection of circuit breakers and power cables for separately installing each indoor unit:

## Low ESP Duct Type

Model	Power Supply	Circuit Breaker Capacity (A)	Minimum Sectional Area of Ground Wire (mm <sup>2</sup> /AWG)	Minimum Sectional Area of Power Cord (mm <sup>2</sup> /AWG)
GMV-ND18PLS/C-T	220-240V~50Hz/208-230V~60Hz	6	1.0/AWG18	1.0/AWG18

## Heat Storage Module

Model	Power Supply	Circuit Breaker Capacity (A)	Minimum Sectional Area of Ground Wire (mm <sup>2</sup> /AWG)	Minimum Sectional Area of Power Cord (mm <sup>2</sup> /AWG)
XRZ180L/A-T	220-240V~50Hz/208-230V~60Hz	6	1.0/AWG18	1.0/AWG18

### Notes:

- ① The circuit breaker and power cable specifications in the above table are selected according to the maximum unit power (maximum current).
- ② The power cable specifications in the table are obtained under the condition that the multi-copper core cable (such as YJV copper-core XLPE insulated power cable) is laid in the wire trough in an exposed manner (the ambient temperature is 40°C and the cable operating temperature is 90°C) (GB/T 16895.15). If the use condition is different, calculate and adjust the specification according to the corresponding national standard.
- ③ The circuit breaker specifications in the above table are obtained under the condition that the ambient temperature is 40°C when the circuit breaker is operating. If the use condition is different, calculate and adjust the specification according to the instructions on circuit breaker specifications.
- ④ A cut-off device is installed near the unit. The minimum space between levels of the cut-off device is 3 mm (it is required for both the indoor unit and outdoor unit).

## 4 COOLING/HEATING CAPACITY CORRECTION

### 4.1 Cooling Capacity Correction

TC: Total Capacity; SC: Sensible Capacity

## 5 DIMENSION PARAMETERS

### 5.1 Low ESP Duct Type GMV-ND\*\*PLS/A-T

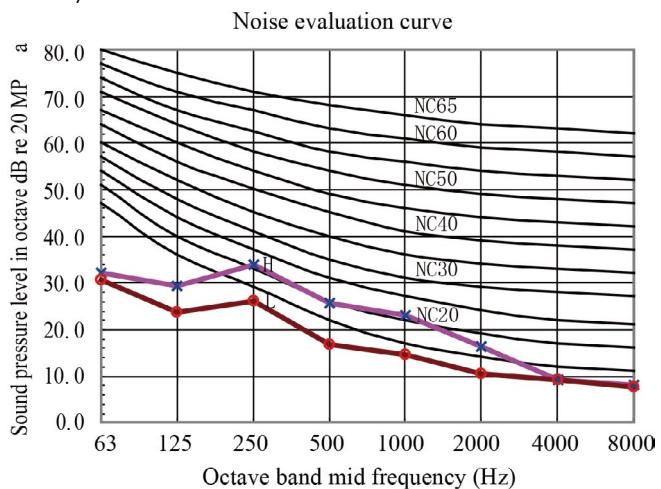

Transandient meter of sound level meter

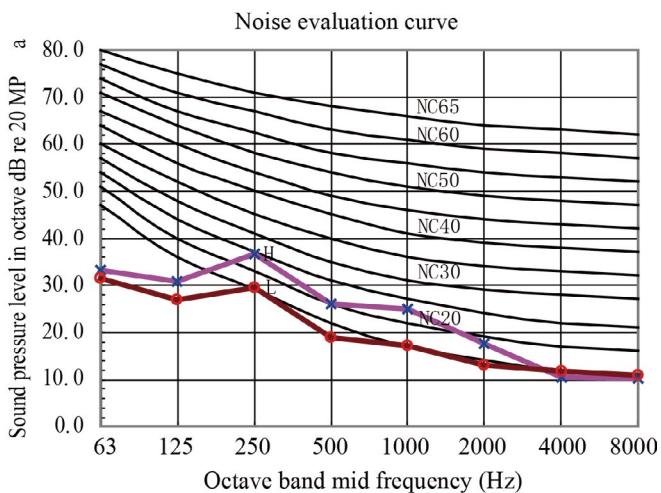

#### Notes:

- ① The noise level is measured in the semi-anechoic room. It will be slightly higher due to change of the environment during actual operation.
- ② The noise level is measured under the standard test condition.
- ③ The noise level is measured under the condition of rear air return. The noise level will be a little higher if the lower air return mode is adopted.

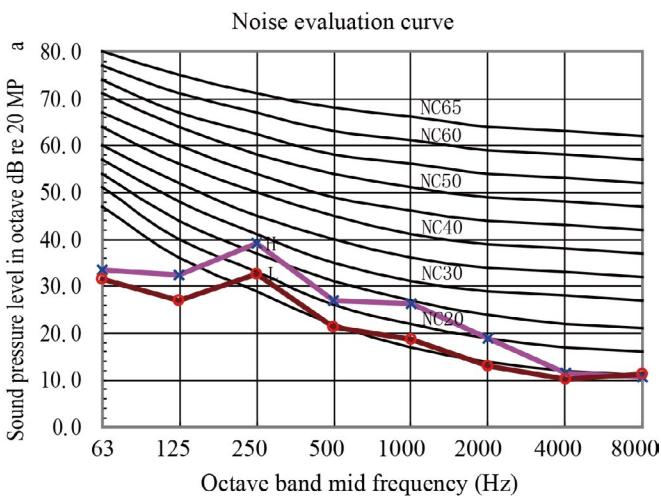

Model GMV-ND18~28PLS/C-T

Model GMV-ND32~36PLS/C-T

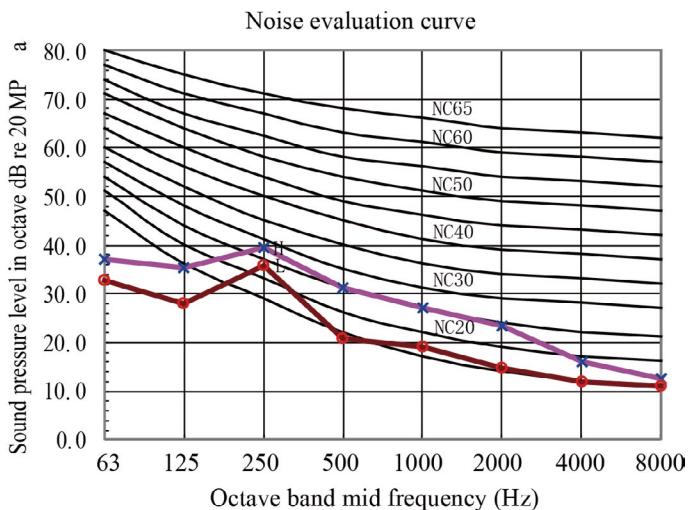

Model GMV-ND40~50PLS/C-T

### 6.3 Fresh Air Processing Indoor Unit

When this unit is installed, select the static pressure according to the actual air volume from 1000~3500m<sup>3</sup>/h . There're 13 static pressure notches for selection. Please refer to the Installation, Debugging and Maintenance Manual for the adjustment method for the static pressure. The curve diagram between air volume and static pressure is as below. The corresponding static pressure is from notch 1 to notch 13 for the curve from lower to upper side.

## 7 UNIT INSTALLATION SPACE REQUIREMENTS

### 7.1 Precautions on the indoor unit design

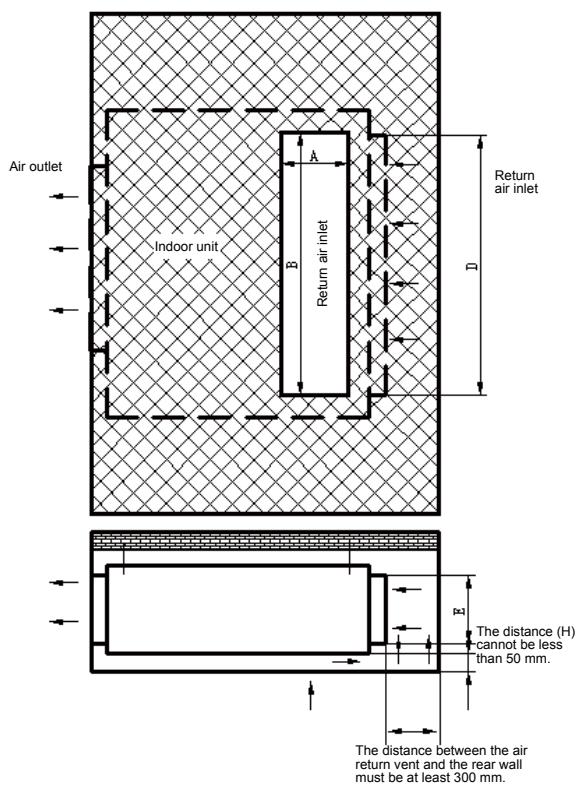

The following aspects must be specially noted in consideration of the indoor unit location:

- (1) The location should satisfy the optimal airflow organization for air conditioner in the actual project, and implement the most uniform distribution of temperature.
- (2) Avoid mixed use of air ducts for air supply and air return in different air conditioning areas.
- (3) When the indoor unit in the air supply mode of air duct is selected, it is preferred to adopt the rear air return mode for the unit to further efficiently reduce the air return noise of the unit.

(4) In locating, consider whether air return of the unit will be affected. For the indoor unit in the air supply mode of air duct, the air return frame must be more than 300 mm away from the back wall (rear air return mode) or other barriers.

(5) If the unit uses the rear air return mode and the ceiling uses the air return mode directly below the unit, the distance between the unit bottom and the ceiling must be over 50 mm. Meanwhile, the effective circulation area between the unit bottom and the ceiling cannot be smaller than the air return vent area of the unit. For example:

# DC INVERTER MULTI VRF INDOOR UNIT TECHNICAL SALES GUIDE

Air return area of the unit:  $S_1 = D \times E$

Air return vent circumference of the ceiling:  $L = 2 \times (A + B)$

Effective air return area of the ceiling:  $S_2 = L \times H$

$S_2$  cannot be smaller than  $S_1$ . The distance  $H$  between the ceiling and the unit cannot be smaller than 50 mm.

(6) No barrier blocking air flow should exist at the air inlet or outlet of the indoor unit. The indoor unit should be installed at a position 2.3 m higher than the floor.

(7) For the indoor unit with the rated Cooling capacity greater than 5.6 Kw, an air supply duct should be additionally added, and the air duct and air outlet should be set properly to reduce noises.

(8) A sufficient maintenance space should be reserved in locating the unit.

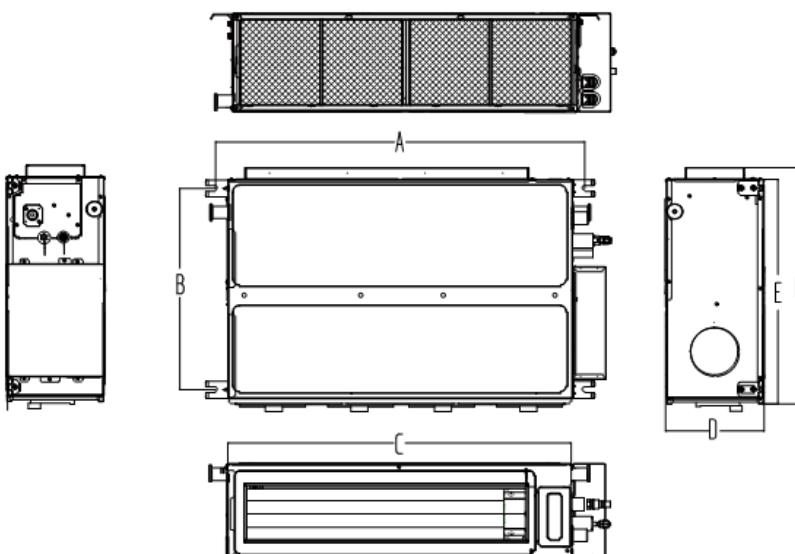

## 7.2 Different installation space requirements for various of indoor units

### 7.2.1 Duct Unit Series

#### 7.2.1.1 Dimensions

(1) Low ESP Duct Type Series

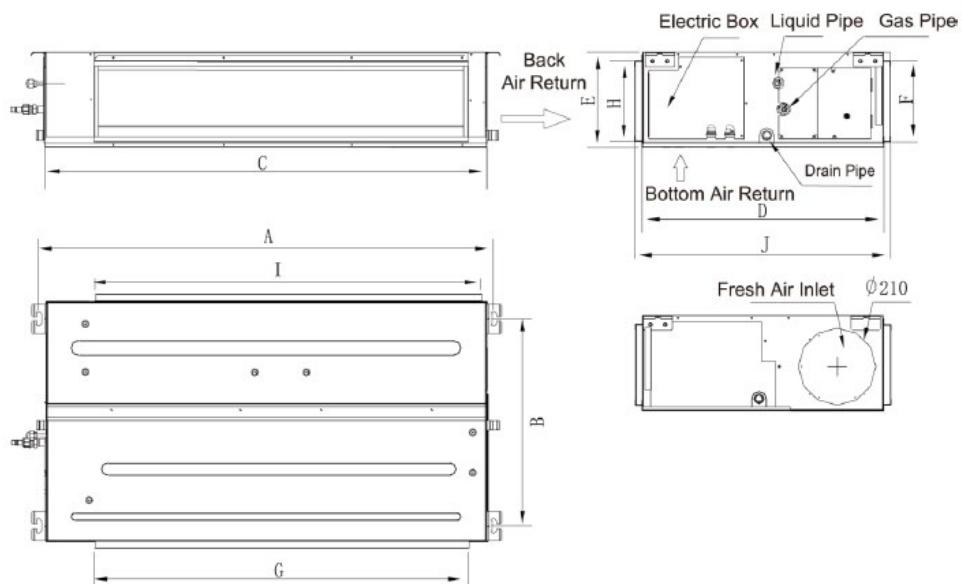

The figure below is applicable to the model whose Cooling capacity range is 1.8 kW to 7.1 kW.

Unit: mm

Model	Item	A	B	C	D	E	F
GMV-ND18~36PLS/C-T	760	415	710	200	462	486	
GMV-ND40~63PLS/C-T	1060	415	1010	200	462	486	
GMV-ND71PLS/C-T	1360	415	1310	200	462	486	

The figure below is applicable to the model whose Cooling capacity range is 8.0 kW to 14.0 kW.

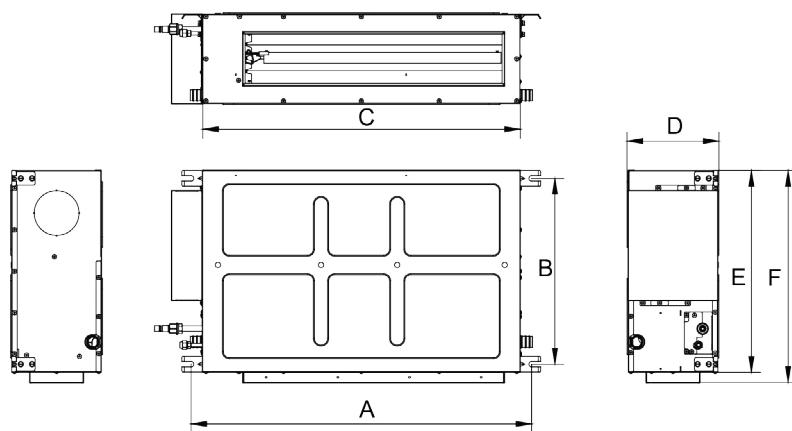

The table below lists the detailed dimensions.

Unit: mm

Model \ Item	A	B	C	D	E	F	G	H	I	J
GMV-ND80PLS/C-T	1236	565	1200	655	260	222	1016	220	1050	695

GMV-ND90~180PHS/B-T		1440	500	1530	300	754	1400	700

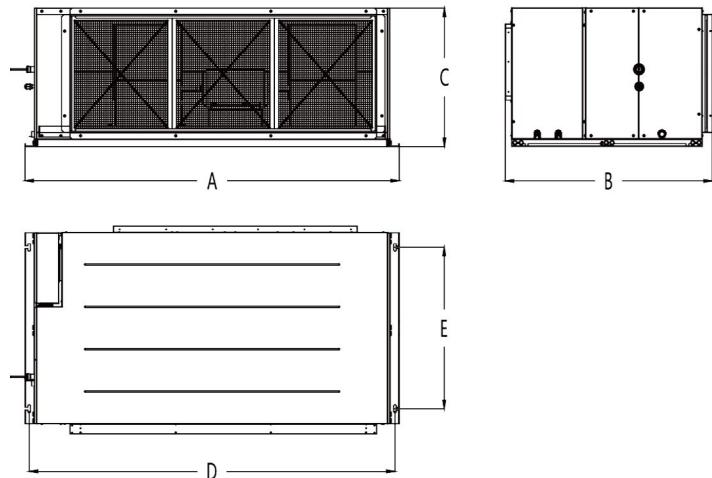

The figure below is applicable to the model whose Cooling capacity range is 22.4 kW to 28.0 kW.

The table below lists the detailed dimensions.

Unit: mm

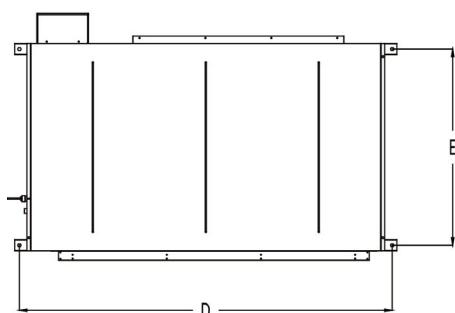

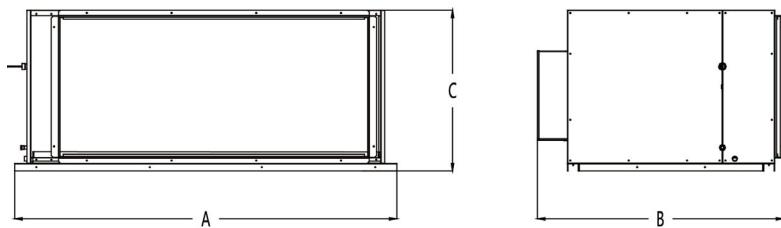

Model	A	B	C	D	E	F
GMV-ND224PH/A-T	1353	632	992	1150	192	327
GMV-ND280PH/A-T	1563	706	992	1350	192	402

The table below lists the detailed dimensions.

Unit: mm

Model	A	B	C	D	E
GMV-ND400PH/AR-X	1770	982	650	1730	760
GMV-ND450PH/AR-X	2030	1179	700	1980	1040

The table below lists the detailed dimensions.

Unit: mm

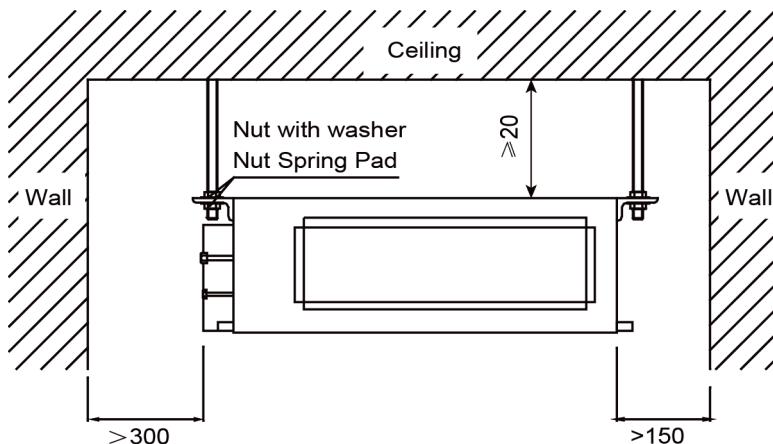

Model	A	B	C	D	E
GMV-N560PH/AR-M	2030	1309	850	1980	1040

# DC INVERTER MULTI VRF INDOOR UNIT TECHNICAL SALES GUIDE

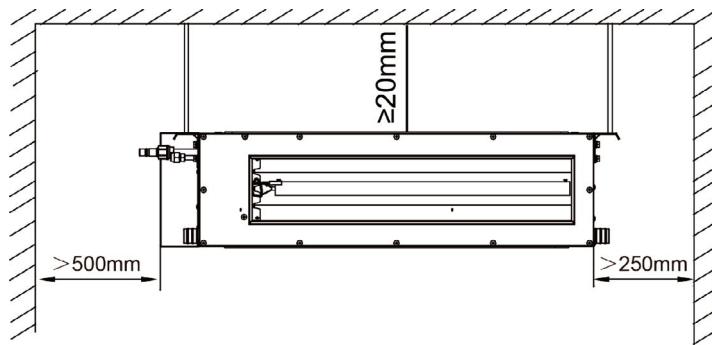

## 7.2.1.2 Installation and Maintenance Spaces of Air Duct Type Units

Unit: mm

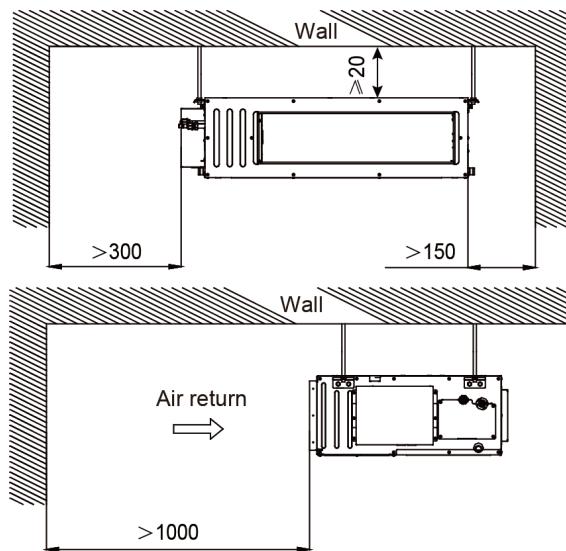

### (1) Low ESP Duct Type GMV-ND\*\*PLS/A-T Series

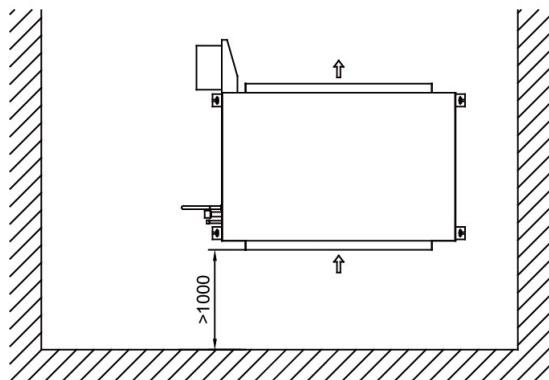

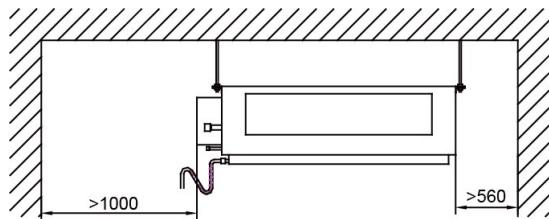

### (2) Slim Duct Type GMV-ND\*\*PL/B-T Series

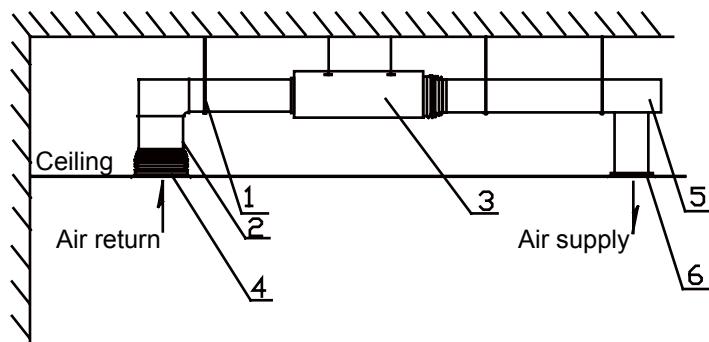

### (3) Super High Static Pressure Duct Type Indoor Unit GMV-ND\*\*PHS/B-T Series

## (4) Super High Static Pressure Duct Type Indoor Unit GMV-ND\*\*PH/AR-X and GMV-N\*\*PH/AR-M Series

**7.2.1.3 Installing Air Supply Ducts**

## (1) Installing the rectangular air duct

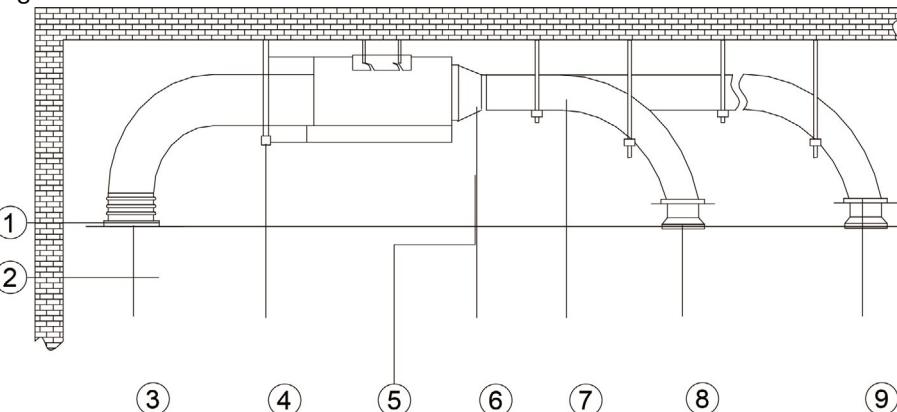

No.	1	2	3	4	5	6
Name	Hanger rod	Air return pipe	Air duct-type indoor unit	Return air inlet	Air supply duct	Air outlet

The above figure indicates only installation of the rear air return vent. The lower air return vent can also be used according to the actual installation requirement, and the installation method is similar to the method of installing the rear air return vent. The air supply duct is a rectangular air duct, which is connected to the air outlet of indoor unit. At least one of all the air supply outlets should be kept open. The air supply outlet and air return vent joint, and the air return vent and air supply outlet joint are connected using canvas (select canvas with thermal insulation effect). When there are static pressure and low noise requirements, a plenum box is connected between the air supply outlet and the air supply duct. The air outlet dimension of the plenum box is consistent with the air supply outlet dimension. The plenum box is connected to the air supply outlet using canvas.

If the rear air return mode is used, a space for installing the return duct is reserved in the suspended air duct indoor unit. The air return vent dimension should be as large as possible, and the air speed should be as low as possible.

# DC INVERTER MULTI VRF INDOOR UNIT TECHNICAL SALES GUIDE

## (2) Installing the circular air duct

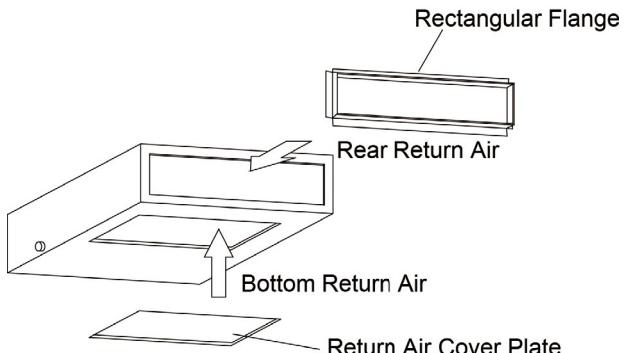

No.	Name	No.	Name
1	Return Air Duct	6	Transition Pipe
2	Canvas Duct	7	Supply Air Duct
3	Return Air Blinds	8	Diffuser
4	Hanger Rod	9	Diffuser Connector
5	Supply Air Outlet		

### Notes:

- ① The maximum air duct length refers to the total length of the air supply duct of the farthest air supply outlet plus the total length of the return duct of the corresponding farthest return air inlet.
- ② To connect the unit with auxiliary electric heating to a circular air duct, the straight length of the transition air duct should be at least 200 mm.
- ◆ Installation procedure of the circular air duct
  - 1) Pre-install the circular air outlet at the transition air duct, and use self tapping screws to fasten it.
  - 2) Cover the air outlet of the unit with the transition air duct, and use rivets to connect them.
  - 3) Cover the circular air outlet with the duct outlet, and use a band to tie them tightly. Then, the circular air duct is connected to the unit. Other operations are omitted here.

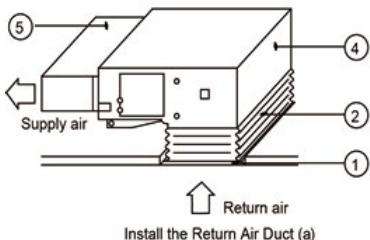

### 7.2.1.4 Installing Air Return Pipe

- (1) The unit is in rear air return mode before delivery, and the air return cover is installed at the lower part, as shown below.
- (2) If lower air return is required, exchange the position of the square flange with that of the air return cover.

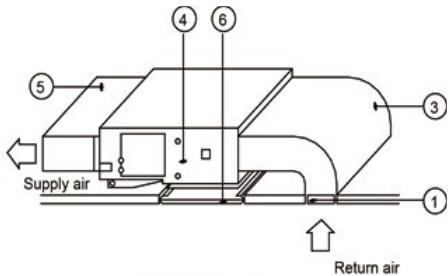

- (3) Use rivets to connect the return duct to the air return vent of the indoor unit, and connect the other end to the air return vent. To freely adjust the height, prepare a section of canvas air duct, use 8# iron wire to reinforce the duct, and fold it.

Select lower air return or rear air return mode according to the installation and maintenance spaces, and install the return duct as shown below.

Install the Return Air Duct (a)

Install the Return Air Duct (b)

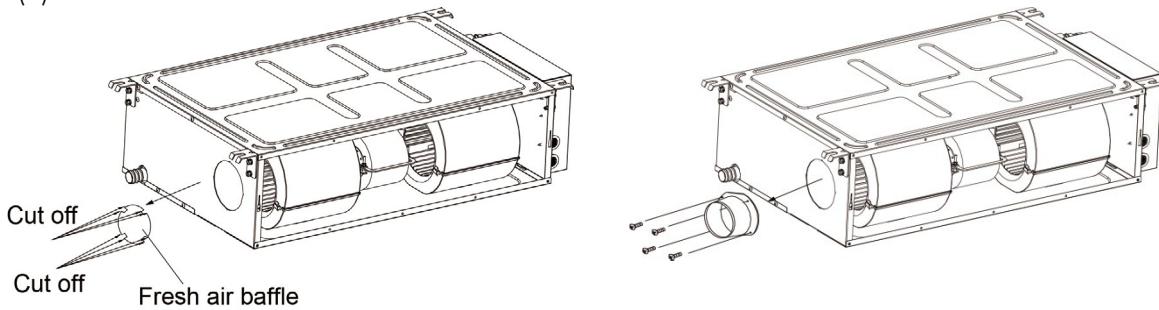

No.	Name	No.	Name
1	Air return vent (with a filter screen)	4	Indoor unit
2	Canvas air duct	5	Air supply duct
3	Return duct	6	Maintenance grille

#### Notes:

- ① Since the lower air return mode generates more noises than the rear air return mode does, the lower air return mode is not recommended.
- ② Usually the lower air return mode is adopted for the site with a small installation space.

#### 7.2.1.5 Installing Fresh Air Duct

- (1) To connect a fresh air duct, first cut off the fresh air baffle, as shown in the left part of the following figure. If you do not want to use the fresh air duct, use sponge to block the fresh air baffle gap.
- (2) Install the circular flange to connect to the fresh air duct, as shown in the right part of the following figure.
- (3) Both the air duct and the circular flange should be well sealed and insulated.
- (4) Fresh air must be filtered air.

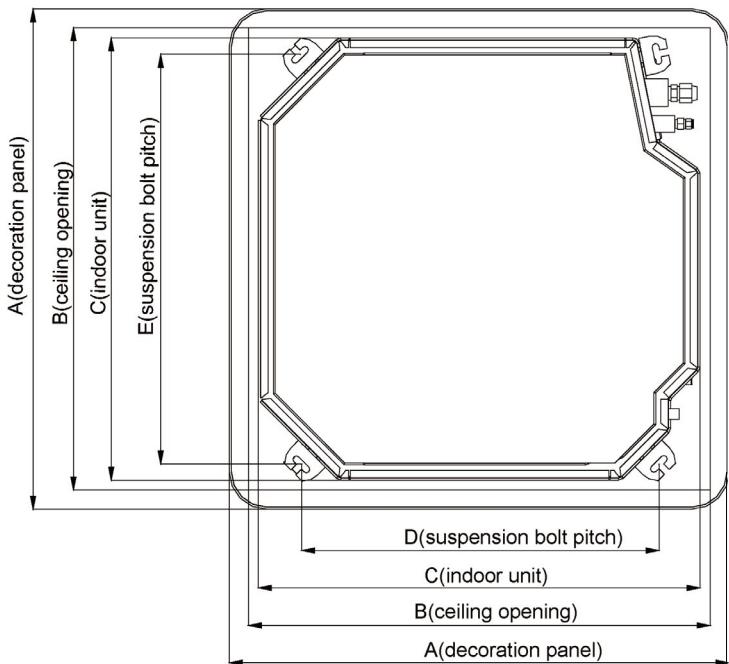

#### Notes:

- ① Both the air supply duct and return duct should be provided with an insulating layer to prevent heat loss and condensation.
- ② All the air supply ducts and return ducts should be fastened on the floor precast slab using iron supporters, and the air duct joints should be sealed properly using glue to prevent air leakage.
- ③ The air duct design and construction must comply with the relevant engineering specification requirements of the state.
- ④ The recommended distance between the return duct edge and the wall is over 150 mm, and a filter should be installed at the air return vent.
- ⑤ Measures for noise reduction and shock absorption should be taken into account in air duct design and construction.

## Installation and Maintenance Spaces

### 7.2.13 Air Handler type Indoor Unit

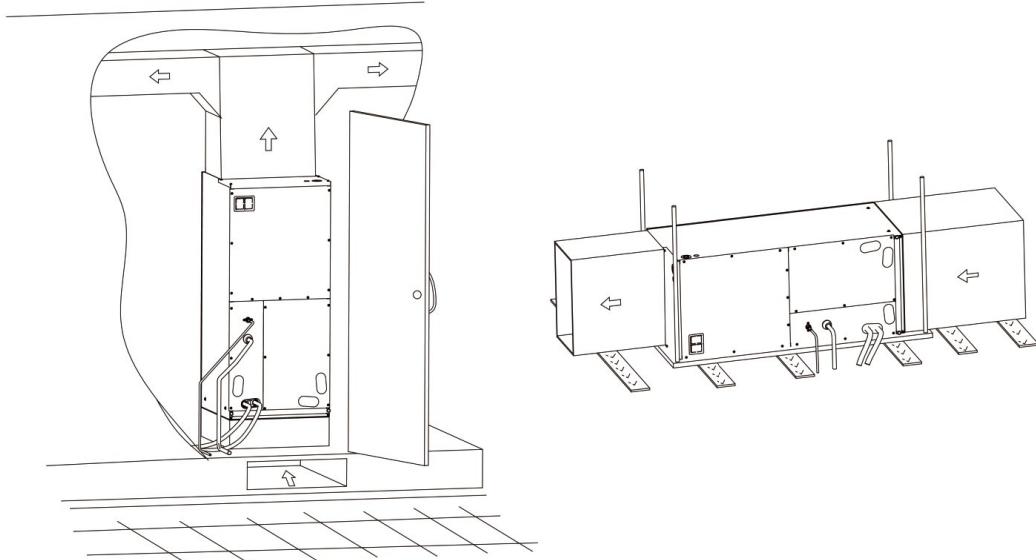

MODEL	DIMENSION				
	W	D	H	A	B
GMV-NR71A/A-D	460	540	1105	295	426
GMV-NR90A/A-D	460	540	1105	295	426
GMV-NR100A/A-D	540	540	1224	295	508
GMV-NR112A/A-D	540	540	1224	295	508
GMV-NR140A/A-D	630	540	1224	295	508

When installing the air handler, take consideration to minimize the length of refrigerant tubing as much as possible. Do not install the air handler in a location either above or below the condenser that violates the instructions provided with the condenser. Service clearance is to take precedence. Allow a minimum of 24" in front of the unit for service clearance. When installing in an area directly over a finished ceiling (such as an attic), an emergency drain pan is required directly under the unit. See local and state codes for requirements. When installing this unit in an area that may become wet, elevate the unit with a sturdy, non-porous material. In installations that may lead to physical damage (i.e. a garage) it is advised to install a protective barrier to prevent such damage.

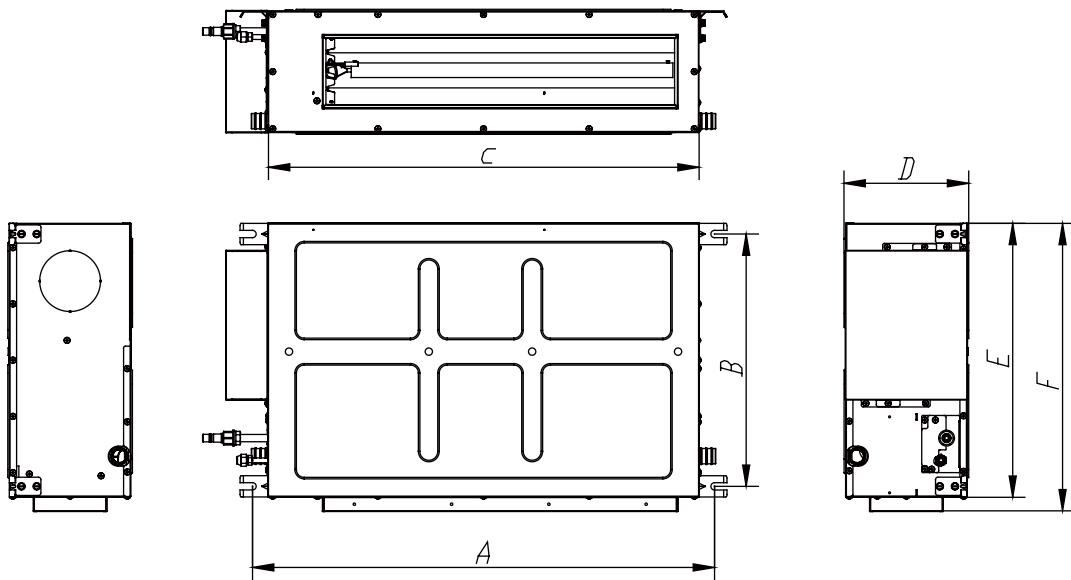

This air handler is designed for a complete supply and return ductwork system. Do not operate this product without all ductwork attached.

Based upon the actual conditions, if air handler is installed as type (A), the air handler should be concealed in a specific room or space and make sure the air handler is not accessible to the general public.

Based upon the actual conditions, if air handler is installed as type (B), make sure that there is enough space for care and maintenance and the height between the air handler and ground is above 2500mm. And the air handler is not accessible to the general public.

# DC INVERTER MULTI VRF INDOOR UNIT TECHNICAL SALES GUIDE

## 7.3 Locating the manhole and air return vent

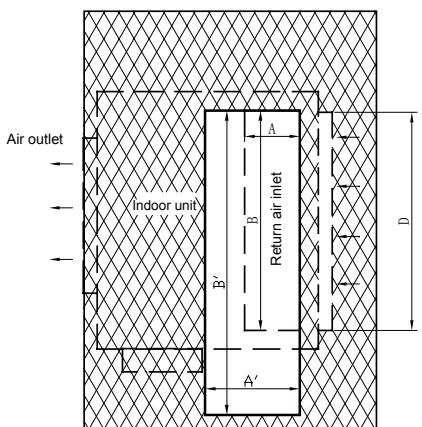

In addition to consideration of the sufficient maintenance space to be reserved during unit locating, it is also important to locate the manhole. If manhole locating is improper, it will also make future maintenance and repair more difficult.

The manhole size can accommodate the shoulder width of a normal adult. It cannot be smaller than 450 mm × 450 mm. Usually the indoor unit in the air supply mode of air duct is located at the electric box side of the unit, the distance from the electric box is 50 mm to 100 mm, and maintenance of the pipeline part must also be considered. The pipeline maintenance position of the pipeline is mainly considered for the air raise type indoor unit, so the manhole can be located at a position that ensures the distance between one edge and the connection pipe is 200 mm to 250 mm. The schematic diagram is shown below:

The air return vent position must also be considered for the indoor unit in the air supply mode of air duct. The air return vent is responsible for air return of the unit, and also used to complete maintenance of the indoor fan motor and filter screen. Therefore, in addition to meeting the air return design requirements mentioned above, there is a must to ensure the requirement for replacing the motor and filter screen.

- (1) Do not set the air return vent of the unit near the door, toilet or kitchen; otherwise problems such as condensation and peculiar smell may be caused.
- (2) The length direction of the air return vent cannot be smaller than 2/3 of the air return venting length of the unit.
- (3) If the air return vent is set directly behind the unit, the distance between its position and the unit cannot be greater than 300 mm.
- (4) The width direction of the air return vent cannot be smaller than 200 mm.
- (5) For the design of also using the air return vent as a manhole for the electric box, the maintenance position should also be reserved at the electric box side according to the above principle. At the same time, it is required to consider whether the position of the air return vent can ensure easy removal and replacement of the fan motor and filter screen. Therefore, the air return vent should be enlarged to 1.5 to 2 times of the original circulation area according to the actual conditions and on the basis of satisfying the air volume design. The schematic diagram is shown below:

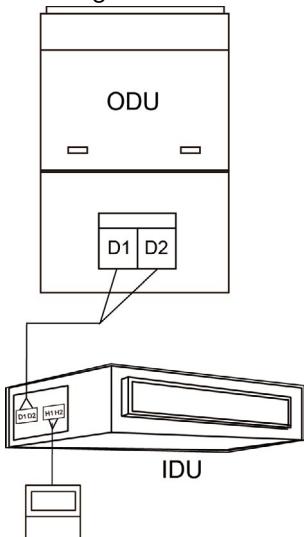

Original air return vent area:  $S = A \times B$   
 Currently air return vent area:  $S' = A' \times B'$   
 $S' \geq (1.5 \sim 2.0)S$

# DC INVERTER MULTI VRF INDOOR UNIT TECHNICAL SALES GUIDE

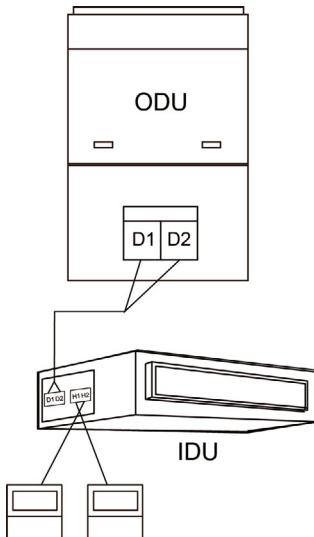

## 8 REQUIREMENTS FOR COMMUNICATION MODE

### 8.1 Communication Connection Mode between the Indoor Unit and Wired Controller

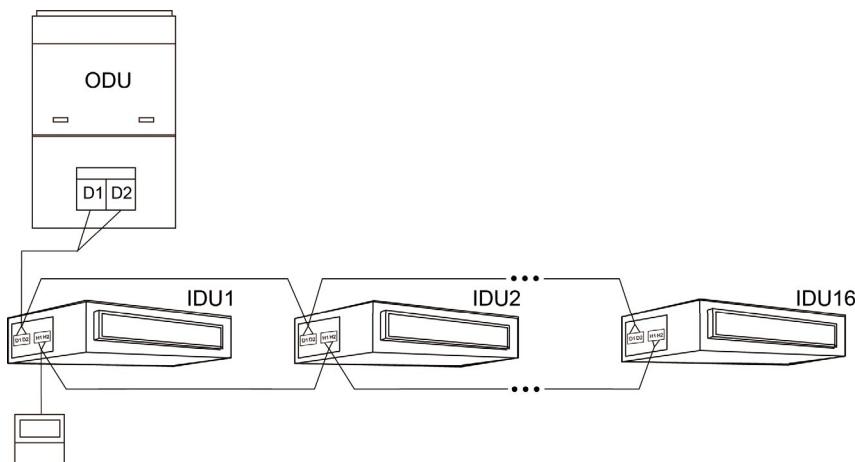

The indoor unit and the wired controller are connected in one of the following four modes, which are respectively shown in Figure below:

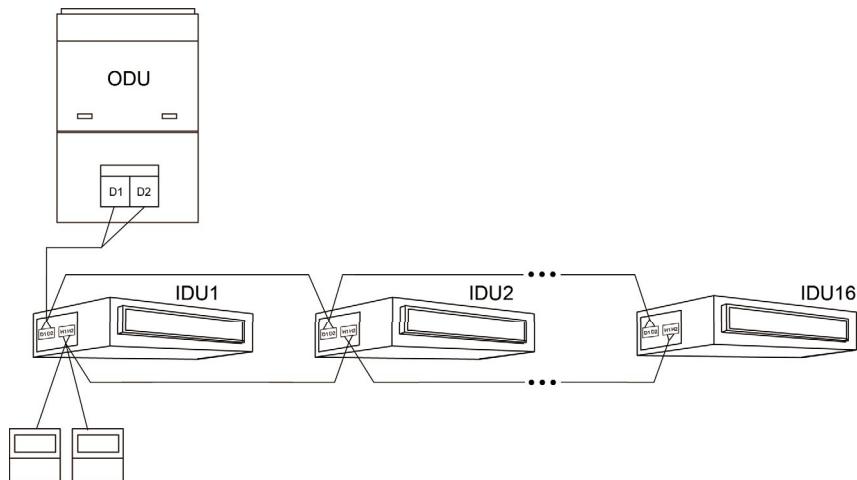

One wire controller controls one indoor unit

Two wire controllers control one indoor unit

One wire controller controls multiple indoor units

Two wire controllers control multiple indoor units

**Note:**

Multi variable air conditioners floor standing type indoor unit only applicable One wire controller controls one indoor unit.

When two wired controllers control multiple indoor units at the same time, the wired controller can be connected to any indoor unit, the connected indoor units must belong to the same series, and only one wired controller must be set to a slave wired controller. The number of indoor units controlled by the wired controllers is not more than 16, and the connected indoor units must be on the same indoor unit network.

The slave wired controller can be set in the power-on or power-off status:

(1) Press and hold the "FUNCTION" button on the wired controller to be set to a slave wired controller for five seconds. The temperature area displays "C00". Continue holding the "FUNCTION" button for five seconds to enter the wired controller parameter setting interface. The temperature area displays "P00" by default.

(2) Select a P13 parameter code by pressing "▲" or "▼". Press the "MODE" button to switch to parameter value settings. The parameter value blinks. Press "▲" or "▼" to select "02", and then press the "ENTER/CANCEL" button to complete settings.

(3) Press the "ENTER/CANCEL" button to return to the upper-level menu till quitting parameter settings. The user parameter setting list is as follows:

Parameter Code	Parameter Name	Parameter Range	Default Value	Remarks
P13	Wired controller address settings	01: master wired controller 02: slave wired controller	01	When two wired controllers simultaneously control one or more indoor units, the two wired controllers must use different addresses. The slave wired controller (address: 02) does not have the unit parameter setting function except its own address settings.

# DC INVERTER MULTI VRF INDOOR UNIT TECHNICAL SALES GUIDE

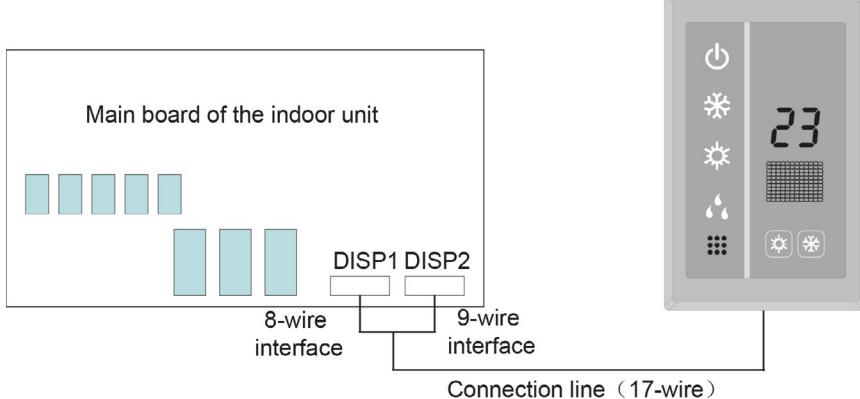

## Notes:

- ① The default factory setting of all the wired controllers is the master wired controller status.
- ② In the parameter setting status, the "FAN", "Timer", "SLEEP", and "SWING" buttons are invalid. By pressing "ON/OFF", you can return to the main interface but will not power on/off the unit.
- ③ In the parameter setting status, signals of the remote controller are invalid.

## 8.2 Connection Mode between the Duct Type Indoor Unit and Receiving LED Panel

When the air duct-type indoor unit needs to be connected to a remote receiving LED panel, they are connected through DISP1 and DISP2 of the main board for indoor unit:

Indoor Unit Type	Model of Remote Receiving LED Panel	Connection Wire Type	Main Board Interface of Corresponding Indoor Unit
Air duct-type indoor unit	JS05	Inter-board connecting line (17 cores)	DISP1 (interconnected to the 8-core interface) DISP2 (interconnected to the 9-core interface)

## Notes:

- ① The wired controller and remote receiving LED panel can be used at the same time.
- ② Note to select a remote controller when a remote receiving LED panel is used.
- ③ Those models (GMV-ND18PLS/C-T~ GMV-ND71PLS/C-T, GMV-80PLS/C-T~GMV-140PLS/C-T) can't match with remote receiving LED panel.

## 9 OPTIONAL COMPONENTS

Wired controller	XK46, XK79, XK86, XE70-33/H	For the Cassette, Wall Mounted, Console, Floor Ceiling, Concealed Floor Standing, AHU-KIT type units
Remote controller	YAP1F	For the Duct type units
Remote receiving LED panel	JS05	Applicable to the Duct type indoor units
Remote controller for debugging	YV1L1	With the debugging function, used to set functions of the indoor unit
Centralized controller	CE52-24/F(C)	—
E-Smart Zone controller	CE54-24/F(C)	—
